                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HER-2/neu (erbB-2) oncogene encodes a receptor-like tyrosine kinase. The extracellular domain of pl85-HER-2 is proteolytically shed from breast carcinoma cells in culture and is found in serum of some cancer patients and may be a serum marker of metastatic breast cancer. An alternative HER-2 mRNA of 4.8 kb with a 274 bp insert (intron 8) has been identified. The retained intron is in-frame and encodes a 79 amino acid extension designated ECDIIIa (the present sequence), which is inserted at residue 340 of pl85-HER-2. The alternative mRNA predicts a truncated HER-2 protein (approximately 68 kDa) that lacks the transmembrane and intracellular domains (see AAY97240.). p68HER-2 specifically binds to pl85-HER-2 without activating HER-2. It could therefore block dimerization of pl85-HER-2. The p68HER-2 polypeptide binds to a site on the ECD of HER-2 that is different from the site of binding for

p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 ECDIIIa
                                                                                particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The method involves administering an agent that binds to an extracelly domain (ECD) of EGFR. The invention also relates to a naturally occurr inhibitor of HER-2 receptor tyrosine kinase called herstatin. The coexpression of herstatin with p185HER2 causes a striking reduction in c growth that corresponds with suppression of p185 autophosphorylation. method or a pharmaceutical composition is useful for treating a solid tumour (selected from squamous cell carcinoma, lung carcinoma, colon carcinoma and glial cell tumour) characterised by EGFR expression. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating solid tumor characterized by expression of endothelial growth factor receptor, involves administering recombinant herstatin that binds to extracellular domain of the endothelial growth factor recepto:

The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p80HER-2 which lacks the transmembrane and intracellular domains of the product of the control of the contr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify

The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product
                                                                                                                                                                                                   the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identification tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence.
                                                                                                                                                                                                                                                                of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise
                                                                                                                                                       derived from p68HER-2 generic sequence sequence listing (AAE09181).
                                                                                                                           Sequence
                                                                                                                                                                         Note: The present sequence is derived from p68HER-2 generic
                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel HER-2 (herstatin-2)
                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 11; Page -; 61pp; English.

Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p88HER-2 which lacks the transmembrane and intracellular domains of
                                                                                                                          Note: The derived
                                                                                                                                              p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind trightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence.
                                                                                                                                                                                                                                                                                                                                                                             WPI;

The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The present sequence is not shown derived from p68HER-2 generic sequence sequence listing (AAE09181).
                                                                                                                                           Misc-difference
                                                                                                                                                                                          Misc-difference
                                                                                                                                                                                                                                                                                                                                     Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HER-2; herstatin;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAE09212 standard; Protein; 419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein

The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10<sup>8</sup>. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product

The method involves administering an agent that binds to an extracellular domain (ECD) of EGFR. The invention also relates to a naturally occurring inhibitor of HER-2 receptor tyrosine kinase called herstatin. The co-
  HER-2; erbB-2; oncoge extracellular domain
                          Truncated HER-2, p68-HER-2.

p185-HER-2 without activating HER-2. It could therefore block dimerization of p185-HER-2. The p68HER-2 polypeptide binds to a sittle ECD of HER-2 that is different from the site of binding for Herceptin (RTM) (a marketed humanized monoclonal antibody that is for the treatment of cancer and binds to the ECD of HER-2). The me
                                                                                                                                                                                            HER-2 mRNA of 4.8 kb with a 274 bp insert (intron 8) has been identified. The retained intron is in-frame and encodes a 79 amino acid extension designated ECDIIIa (the present sequence), which is inserted a residue 340 of pl85-HER-2. The alternative mRNA predicts a truncated HER-2 protein (approximately 68 kDa) that lacks the transmembrane and intracellular domains (see AAY97240). p88HER-2 specifically binds to
                                                                                                                                                                                                                                                                                                                                carcinoma cells in culture and is found in serum of some cancer patients and may be a serum marker of metastatic breast cancer. An alternative HER-2 mRNA of 4.8 kb with a 274 bp insert /internative
compositions, polypeptides and antibodies are used to treat solid tumours such as breast cancer, small cell lung carcinoma, ovarian and/or colon cancer, especially where over-expression of HER-2 is

The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence.
                                             Misc-difference
                                                                                                                                                                                                                                                                        Key
                                                                                                                                                                                                                                                                                             Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                  Human p68HER-2 generic protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The present sequence is not shown derived from p68HER-2 generic sequence sequence listing (AAE09181).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of the alternative transcript is a truncated HER-2 protein design p68HER-2 which lacks the transmembrane and intracellular domains

cc particularly a polypeptide that binds to the extracellular domain (ECD) cc of HER-2 at a site that is different from the binding site of humanised cc antibody, Herceptin, at an affinity of at least 10°8. The present cc invention is based upon the initial discovery of an alternative HER-2 cc mRNA transcript with 274 bp insert of intron 8. The translation product cf the alternative transcript is a truncated HER-2 protein designated cc p68HER-2 which lacks the transmembrane and intracellular domains of cc p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIa. Cc The ECDIIIA-containing polypeptides bind tightly to, and the us antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the cc nucleic acids encoding these are useful to treat, diagnose and identify containing ECDIIIa variant sequence is human p68HER-2 generic protein cc derived from p68HER-2 generic sequence.

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p8HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence.
                       Note: The present sequence is derived from p68HER-2 generic sequence listing (AAE09181).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key
